

AI VISIBILITY SNAPSHOT

Sample scorecard: Brand X (fly fishing gear) · September 2026

Brand	Brand X (brandx.example)
Category	Fly fishing packs, bags, and gear
Competitors benchmarked	Competitor A, Competitor B, Competitor C
AI engines	ChatGPT (GPT-5.4 mini), Perplexity (Sonar), Google AI Overviews, DeepSeek
Buyer prompts	20 prompts across 4 buyer personas = 80 AI answers
Answers collected	September 27, 2026

1. YOUR AI VISIBILITY SCORE

29 / 100 EMERGING

The short version: AI engines know Brand X. It shows up in more than half of buyer answers and dominates questions about pack organization. But AI almost never sends buyers to brandx.example. Perplexity and Google AI Overviews linked to Competitor A's own site in 21 answers and to Brand X's in none. That gap, not awareness, is what holds the score down.

Brand	AI Visibility Score	Mention rate	Own-site citation rate	Share of voice
Brand X	29	55%	8%	16%
Competitor A	58	94%	36%	28%

Brand	AI Visibility Score	Mention rate	Own-site citation rate	Share of voice
Competitor B	51	95%	16%	28%
Competitor C	46	83%	18%	24%

How to read this: **Mention rate** is the share of AI answers that name the brand. **Own-site citation rate** is the share of answers that link to the brand's own website. **Share of voice** is the brand's share of all brand mentions across the set. Score = mentions 35% + citations 30% + share of voice 20% + accuracy 15%. Bands: 0-24 Invisible · 25-44 Emerging · 45-64 Competitive · 65-100 Leading.

Sample note: the accuracy check (15%) was not run for this sample, so the other three weights are scaled to 100.

2. RESULTS BY AI ENGINE

Engine	Brand X mentioned	Competitor A	Competitor B	brandx.example cited
DeepSeek	70%	95%	95%	n/a (no citations)
Google AI Overviews	55%	80%	95%	0 of 20
ChatGPT	50%	100%	95%	6 of 20
Perplexity	45%	100%	95%	0 of 20

What stands out: Perplexity is Brand X's weakest engine: it names Brand X in fewer than half of answers and never links to its site, while naming Competitor A in every answer. Every Brand X citation came from ChatGPT.

3. WHERE YOU WIN AND WHERE YOU'RE MISSING

Topic	Brand X	Best competitor
Gear organization	96%	Competitor A 100%
Easy access	95%	Competitor B 100%
Travel versatility	92%	Competitor B / Competitor C 92%
Lightweight carry	75%	Competitor A / Competitor B / Competitor C 81%
Waterproof protection	50%	Competitor B / Competitor C 100%
On-water performance	41%	Competitor B 96%
Durability and longevity	29%	Competitor A 100%
Comfort and fit	6%	Competitor A / Competitor B / Competitor C 88%

Wins: Brand X is effectively tied with the leaders on organization, access, and travel. AI already associates the brand with well-designed packs.

Gaps: Waterproofing (50%) and durability (29%) are the pack-relevant gaps worth closing. Comfort and fit, and much of on-water performance, are mostly questions about waders, boots, and base layers, so a low score there reflects the product line more than a visibility problem.

By buyer type: strongest with the Detail-Oriented Gear Organizer (80%); weakest with the Legacy-Driven Family Angler (25%), who asks which brands are "established" and "trusted."

4. THE SOURCES AI TRUSTS IN YOUR CATEGORY

AI engines cited 154 domains (659 citations) while answering these 20 questions. The top 10:

#	Domain	Type	Citations
1	google.com	Search engine	53
2	competitor-a.example	Competitor	44
3	fieldandstream.com	Publication	33
4	reddit.com	Community	30
5	flylordsmag.com	Publication	29
6	youtube.com	Video	24
7	thewadinglist.com	Publication	20
8	backcountry.com	Retailer	17

#	Domain	Type	Citations
9	competitor-c.example	Competitor	17
10	gearjunkie.com	Publication	16

What this means: Competitor A is the second most-cited domain overall, and most of those citations go to need-based category pages like "waterproof packs & bags," "sling packs," and "vests." Brand X's few citations point mostly to a general "fishing" collection page. The other heavy hitters are gear roundups, Reddit, and YouTube: places buyers go for a second opinion.

5. AI CRAWLER ACCESS CHECK

Check	Result	Status
robots.txt rules for AI crawlers	No AI-specific blocks; all crawlers allowed	Pass
Test fetch as GPTBot, OAI-SearchBot, PerplexityBot, ClaudeBot	All returned 200 on a key category page	Pass
CDN / firewall	Cloudflare in front of the ecommerce platform; no bot challenge on test fetches	Pass
llms.txt	Present (default ecommerce-platform agent instructions)	Present

Bottom line: access isn't the problem. AI crawlers can reach the site. The issue is what they find when they get there.

6. YOUR TOP 5 FIXES

#	Fix	Impact	Effort
1	Build need-based category pages AI can cite. Create collection pages matching how buyers ask ("waterproof packs," "sling packs," "chest packs," "packs for travel"), each with 150–300 words of answer-first copy and a short FAQ. This is exactly how Competitor A earns its citations.	High	Medium
2	Make durability and waterproofing provable. Durability (29%) and waterproofing (50%) trail every major competitor. Put specifics AI can quote on product and category pages: materials, waterproof ratings, warranty terms, and long-term use stories from guides.	High	Medium

#	Fix	Impact	Effort
3	Tell the heritage story for "trusted brand" questions. The Legacy-Driven buyer finds Brand X only 25% of the time. An About/heritage page with founding year, history, and guide partnerships, plus Organization schema (foundingDate, sameAs), gives AI the facts it looks for.	Medium	Low
4	Win placement in the roundups AI cites for packs. Target the pack and vest roundups that appear most in answers (Backcountry, GearJunkie, Field & Stream, Flylords). Brand X already appears in some; check each one and pitch editors on the ones where it's missing.	High	Medium
5	Build signal on Reddit and YouTube. They drew 54 citations combined. Support guide-made pack reviews and comparison videos, and join relevant r/flyfishing gear threads authentically (no astroturfing).	Medium	Medium

7. WHAT'S NEXT

Re-measure in 90 days. Re-run the same prompt set to see what moved. The full answer log is attached so your team can do this too.

Go deeper. The full AI Visibility Audit adds 50 prompts across 5 engines, a brand accuracy check, a complete citation source map, a technical AI-readiness review of your top pages, and a 90-day roadmap with a readout call. Your Snapshot fee is credited if you upgrade within 30 days.
